<b>Target version:</b>		<b>Affected version:</b>	
<b>Resolution:</b>			
<b>Description</b>			
<p>Hello,</p> <p>We use https proxy to access to own redmine server, but on this server redmine is on http protocol. All features work except back_url used by the context menu because it's stay to http protocol.</p> <p>In the file application_controller, the definition of back_url use request.env['HTTP_REFERER'] to create the URL.</p> <p>We just change this line :</p> <pre>url = CGI.unescape(referer.to_s)</pre> <p>To this one to use relative URL</p> <pre>url = CGI.unescape(URI.parse(referer).path)</pre> <p>the use of relative URL is more flexible regardless of the installation mode</p>
