Target version:		Affected version:	
Resolution:			

Description

in nest set when a node move to in the same root, then parent.lft need reload in the method target_lft

```
def target_lft
  scope_for_max_rgt = self.class.where(:root_id => root_id).where(:parent_id => parent_id)
  if id
    scope_for_max_rgt = scope_for_max_rgt.where(id: ...id)
  end
  max_rgt = scope_for_max_rgt.maximum(:rgt)
  if max_rgt
    max_rgt + 1
  elsif parent
    # parent need reload lft, rgt
    parent.send :reload_nested_set_values

    parent.lft + 1
  else
    1
  end
end
```

I still haven't been able to reproduce this issue. I attempted to move an issue but couldn't trigger any inconsistencies in the `lft` and `rgt` values. Could you please provide a step-by-step reproduction process?
