Description

It would be nice to have the ability to specify a number format for numeric custom fields (float and integer) or at least specify the number of decimal digits shown for float fields.

Currently, it is impossible to get i. e. longitude and latitude properly formatted because only two decimal digits are shown. A hard-coded fix as suggested in <https://www.redmine.org/boards/2/topics/65459> is too restrictive because it applies to all float fields.

History

It looks like [#39997](#) implements the basis for number formatting, except that it focuses just on thousands delimiters.
