Redmine - Feature #425

Estimated time in hours per issue, feature, bug... Start Date also include TIME?

Description

ESTIMATED TIME per ISSUE/BUG/FEATURE would be GREAT. I'm new to REDMINE, and so far it looks wonderful!(and I've looked
at dozens of systems, I also liked double choco latte). I've added "Estimated TIME" as an Integer CUSTOM field
but not sure how that'll work in 'reports' etc.....I noticed the "actual time" is logged differently at the
end, might be more intuitive if it could also be shown right on the issue/feature page when editing it...I was also
thinking maybe the START/END Date could be made to include Date AND Time instead of just Date. tx,
Dan

History

#1 - 2007-09-15 10:57 - Jean-Philippe Lang

'Estimated hours' attributes added on issues in r731.

> I was also thinking maybe the START/END Date could be made
> to include Date AND Time instead of just Date.

Any reason ?

Hi, didn't get a chance to look at it yet but many thanks
for adding it, as far as the start/end with time, basically
i guess i was thinking of having a comparison between
"Estimated" time of Projected and actual but I think
"actual" time taken is already an option? Basically
we just
wanted some nice reporting on workload possible based on
estimated fix time for bug etc... (similar to AceProject)
Select AssignTo,count(*) as [Items], SUM) as
[Total Time] from Main where (EstFixTime<>null) Group by
AssignTo
basically a WorkLoad per User that shows how many estimated
HOURS worth of work the person has so manager can see who
has his hands full and who can take on more work. should be
across projects or per project i guess.
