Description

Hi.
I seem to be missing this.
Is there a way to have a default user for the project? I.E. - right now if a user creates a ticket but forgets to assign
it to someone on a dev. team. or select a category, nobody gets an email - it may be days before I get into the system
and see if there are any open tickets that are not assigned to anyone. Right now system doesn't notify me. One solution
would be to force selection of an Assigned To person, or another is to set a default person and category for issues
that didn't get assigned to anyone - so at least someone gets an email

possible solutions:
1) make field assigned to required
2) automatically prepopulate assigned to with a one of the member of the dev team.
3) make category mandatory and if the user doesn't assign a ticket to anyone on the team - it automatically goes to
that default category user.

Thank you

+1 for this.

#2 - 2009-03-05 14:13 - Sébastien de la Marck

Up to this :) .

It's a good idea, I currently need this feature.

+1.
I need this too.

#4 - 2009-06-17 08:07 - Gregor Bader

relates to #482

You could also use the NewIssueAlerts plugin to ensure that a select group of people always get notifications about new issues.

- Status changed from New to Closed

I'll close this in favor of the above-mentioned plugin, of #482 and the already existing possibility for every user to choose to watch the whole of a
project.
