Description	
Hi,	
I've been using Redmine for a few days. I've evaluated other opensource PM products. This is by far the best so far in terms of balance between features and usability. Thanks a ton for the product!	
I have a request - is it possible to create the following relation 'issue #101 starts x days after the start of issue #100 ' in 0.8.7?	
It would be nice to have the following functionality while relating issues,	
<ul style="list-style-type: none">• issue#100 precedes issue#101 by exactly x days (issue #101 starts exactly x days after the end of issue #100) This would automatically move the start date of #101 forward or backward depending on the end date of #100• issue#100 precedes issue#101 by x days (issue #101 starts atleast x days after the end of issue #100) <i>already implemented</i>• issue #101 starts exactly x days after the start of issue #100• issue #101 starts atleast x days after the start of issue #100	
Pardon my ignorance if these features have been addressed in other issues. I did take a look at the Subtasking issue #443, but was hoping for an integrated feature, instead of a plugin.

Have you assigned this issue to me with a specific reason?

Not that I know of currently, but it might be possible that I've missed one... If I find one I'll relate it nonetheless :)

I thought Jean might be unavailable since there was no comment, so I assigned it to you.
Thanks for the reply!

#4 - 2010-07-09 16:07 - Felix Schäfer

- Status changed from New to Closed

- Assignee deleted (Mischa The Evil)

The "precedes/follows" relations are part of the relations that are available in since 0.9, I think this fixes this request.
