## History

### #1 - 2010-01-13 14:58 - Felix Schäfer

[#3808](#) is somewhat similar to the intent this patch has, and I seem to remember another patch not too long ago that tried to do the same thing, although I can't find it.

[Bruno Fonzi](#): the problem with that is that it hardcodes the path in the view, which isn't best practice, and it makes one path mandatory for all repositories in the redmine. This might be fine for installations where the only repos allowed are the svn repos provided by the same people as the redmine server, but this won't work as soon as you have different SCM types and/or any repository, not only the ones on larsvn.

### #2 - 2010-01-14 11:25 - Bruno Prado

You're totally right, Felix.
It works well for me 'cause we only have one SCM type, and its repositories are always in the same place.
Question: how could I change the hardcoded path to receive a variable value?
If it's worthless, you can delete this issue.
Regards.

### #3 - 2010-01-16 17:21 - Holger Just

Maybe you want to have a look at [#232](#) or my [Checkout Plugin](#) which adds a configurable link to the actual selected repository object.

### #4 - 2010-01-18 08:57 - Joachim Fritschi

*- File repository.diff added*

I wanted the same feature without the hassle to configure the urls for all the projects.
The Checkout Plugin is nice but the link is a bit small and has to be configured for every repository which is not an option for me since we have tons of projects. The "root" link in the repository view is really ugly to begin with so i wrote a patch that replaces the root with the configured repository path.

I just uploaded version 0.2 of the plugin mentioned above, which mainly addresses this issue. You can now set default options and define a custom URL using a regular expression. This should remove the need to edit any repository settings for most installations.

Additionally, the link can now be generated using the repository URL as the link text. Most of the time it is now better identifiable.

*- Category set to SCM*

**#7 - 2013-05-24 15:46 - Bruno Medeiros**

Any news on this? The plug-in is discontinued...

**#8 - 2016-02-15 20:54 - Lluís Vilanova**

Is there an alternative with redmine 3.0?

**#9 - 2018-03-28 08:21 - Grigoriy Vasilchenko**

Alternative: https://www.redmine.org/plugins/redmine_scm_path_view
