<b>Description</b>	
<p>Hello.</p> <p>Is there possible to create multiple e-mails for each user? Divided by commas for example. Why it's needed? As for me - I have an Redmine installation, and emai2SMS gate. So, new issues from Redmine can be transferred directly to cell phone and to e-mail.</p> <p>Unfortunately, I'm not experienced in Ruby, so I cannot help with any. May be it is duplicate, but I'm found nothing about. May be some things to do that already exists? Please tell me, or just put a link to docs. Thanks at all!</p>

That would indeed be a nice to have. As the mail-Attribute in LDAP may be multi-valued (e.g. you can have several "mail" entires for a specific cn in LDAP), such a feature should be implemented that in mind. I don't know, how Redmine handles that at the moment, probably it caches only the first mail entry.
