Resolution:			
Description following #1554 and #337 , it appears usefull to think about some private fields (I'd better like ACL-controlled fields than only public/private flag :)) NB: I was sure i saw it as a request a long time ago, but I can not find it again. surry if this is a dup

History

#1 - 2011-09-20 12:01 - Laurent Dairaine

It could be also useful to get fields appearing in the ticket depending on the ticket state.

#2 - 2012-10-12 10:13 - Anton Nepomnyaschih

This is duplicate of [#11329](#).

#3 - 2012-11-22 11:29 - Daniel Felix

- Category set to *Issues workflow*

Well, this one seems to be solved by [#8050](#) and [#12005](#).

You can define some workflow, where some role has write or just read rights, even for custome fields ([#8050](#)). Additionally, you can define if these custom field is visible or just hidden ([#12005](#)).

Is this an implementation, which fits your needs? If see, please give feedback and this Ticket could be closed.
