

Redmine - Feature #4823

Don't evaluate commit-message "refs, closes, ..." when adding a repository

2010-02-12 21:07 - Niklas ...

Status: New	Start date: 2010-02-12
Priority: Normal	Due date:

Target version:	
Resolution:	
Description The problem is like this: <ul style="list-style-type: none">• A project that uses redmine already is forked• that project's repository contains commits with "refs #..." annotations• when the repository-clone is added to another redmine (which already has issues), some issues will be closed / referenced mistakenly, as the issue IDs in the commit message is referencing an issue of a completely different redmine. So it would be nice to have the option to skip that step when adding repositories.

The fact that commit referencing keywords can be configured means that this can probably be closed.
