

Redmine - Feature #4987

Convert internal URLs to canonic wiki links

2010-03-04 23:15 - Martin Cizek

Description			
<p>Users tend to use absolute HTTP URLs when linking internal redmine resources (issues, documents, wiki pages) and it's almost impossible to learn them the correct usage.</p> <p>It would be nice if URLs referring to internal resources were automatically converted to the canonic wiki form. It should be done when a wiki text is submitted and it might be configurable.</p> <p>Example: When I type http://www.redmine.org/issues/3982, the link will be saved as #3982.</p>
