

Redmine - Defect #5053

Project deletion thinks 2 projects are related

2010-03-11 18:20 - Bruno Prado

Status:	New	Start date:	2010-03-11
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Projects	Estimated time:	0.00 hour
Target version:		Affected version:	0.9.1
Resolution:			
Description			
This test was done: there were 3 projects (say, teste, teste1, teste2), independent, none was child or father of any other. Project teste had some children and father. All this structure was removed, letting just teste2 and teste3. Now, when I try to remove teste1, Redmine thinks teste2 is subproject of teste1. See images attached.			

History

#1 - 2010-03-11 18:27 - Bruno Prado

Clicking Yes, project teste2 is not removed.

#2 - 2010-06-13 21:23 - Jean-Baptiste Barth

Cannot reproduce.. Can you confirm it's gone with 0.9.4 version ? If not, could you provide a dump of your "projects" table ?

#3 - 2010-06-19 00:36 - Holger Just

Probably, the fields in the projects table defining the tree structure somehow got corrupted.

You can check if the tree is valid in script/console by typing

```
Project.valid?
```

If this results in something other than true, you can repair the tree using

```
Project.rebuild!
```

#4 - 2011-06-06 09:25 - Luis Serrano Aranda

Any news ? I have a similar error

#5 - 2011-06-06 09:25 - Luis Serrano Aranda

Any news ? I have a similar error

#6 - 2011-08-31 09:00 - Jean-Baptiste Barth

- Priority changed from High to Normal

[Luis Polanco](#): if you have a similar error, help us track that bug down ;) Give us informations requested at [Submitting Bugs](#), and try what Holger suggested (to run "Project.rebuild!" in a "ruby script/console"). A dump of you "projects" table in the database before and after the rebuild would help a lot too.
