<b>Description</b>			
<p>Is it possible to create an option under My Page to just read an RSS feed? I know that I can go to the specific query or page that is feeding the data, but I use the My Page a lot to get statuses, quick references, and basically provide a bookmark into the system. Being able to read an RSS feed would put the data that I currently am going to the query to find, on the page.</p> <p>Thank you. Curt</p>

What kind of RSS feed? From an external provider?

##### #3 - 2010-03-18 20:44 - Curtis Stewart

I was just thinking of a custom query out of redmine, but the idea of incorporating an external provider is not bad.

I was originally thinking of the results of say a custom query like "All Issues in Development" or "Issues Due in 3 Days". Then when I go to My Page, I would see these issues. These may be poor examples, but the idea is to frame a custom query and display the contents instead of a link to the query.

The idea of an external feed, may allow incorporation of data from other systems, including some log trackers we have, that provide RSS feeds.
