Description	
<p>I am in a situation where I have two versions of one piece of software.</p> <p>One is a version that is used in production and another is a version that is used for presentation purposes.</p> <p>Currently I have one parent project for the software with two sub-projects for issues etc.</p> <p>SOFTWARE NAME</p> <ul style="list-style-type: none">- Production Version- Demo Version <p>I also, in my git (although this would be the same for svn and others I guess) two branches. the master branch is for production and the demo branch is for the presentation / demo version.</p> <p>Currently in my setup I have the whole repository associated with the parent project.</p> <p>My Application -----> SOFTWARE REPOSITORY git</p> <ul style="list-style-type: none">- Production Version- Demo Version <p>What I would love to be able to do is change is to that I can associated the sub-projects with individual branches in my repositories, for example.</p> <p>My Application</p> <ul style="list-style-type: none">- Production Version -----> SOFTWARE REPOSITORY git master branch (svn trunk)- Demo Version -----> SOFTWARE REPOSITORY git demo branch (an svn branch)
