Description

If an issue has revisions associated with it, the history and the generated PDF should list those revisions and the commit message for each.

The list of revisions on the side of the description is too subtle and isn't enough information. Having them inline with the other history files would be more helpful.

On a quick glance, I think it would make most sense to have a new Journal created whenever a changeset is assigned to an issue. Then you'd get them into the history and the pdf for free.

On second thought though, there might be problems with existing data, as well as duplication of commit messages and stuff. So maybe the Issue#changesets and Issues#journals could just be combined and sorted on date.

This would go nice with #11269 :)

History

#1 - 2008-01-20 10:40 - Jean-Philippe Lang

Related commit messages are added to the issue details view (html and pdf) in r1085, but they're not combined with comments and changes.
