| Description Here is the scenario: 1. User A assign issue to User B, both User A & B get the notify email 2. User B give feedback and change status to resolved, then assign the issue back to User A. But now only User A receive the notify email. User B cannot see any notify email because he don't involve the issue any more. Should Redmine add both user A & B into the watch list automatically? | |

This will be a good features, occasionally i have issue unassigned from me (due to works load and scheduling by my team leader). But redmine won't tell me about it. It will be nice if I get automatically add as watcher when the issue is assigned to me.

- Status changed from New to Closed

- Resolution set to Duplicate

Duplicate of [#2716](#).

http://github.com/mezza/redmine_auto_watch is a plugin that implements this (though on issue update only, not on creation).

#3 - 2010-10-27 18:45 - Brian Heasley

Would it be difficult to extend this to be on creation per project? That is, any issue created in a certain project gets default watchers?
