Redmine - Defect #5808

Documentation needed for migrating from old trunk while using redmine-subtasks plugin to new trunk that has integrated the plugin into Redmine core

2010-07-02 23:11 - Rahul Vaidya

Status:	Closed		**Start date:**	2010-07-02

Target version:				
Resolution:	Invalid		**Affected version:**	

Description

When trying to upgrade to the latest trunk from the devel build listed below, rake db:migrate fails when trying to create the issue_parent field. I have been using the redmine-subtasks plugin (featured in http://www.redmine.org/issues/443), so this field already exists. I would prefer not to lose my existing parent-child relations. I tried editing the related db migrate script so that this column does not get added, but I ran into additional problems.

Current Redmine Version: 0.9.2.devel.3768
Installed Plugins: redmine-subtasks

Additional errors experienced:

SQLite3::SQLException: duplicate column name: lft: ALTER TABLE "issues" ADD "lft
" integer DEFAULT NULL

History

#1 - 2010-07-02 23:41 - Felix Schäfer

- Status changed from New to Closed

- Resolution set to Invalid

The database schemas of the core subtasks and the plugin are *not* compatible and no upgrade path will be provided for it, see http://www.redmine.org/issues/443#note-184. If you need an upgrade solution, contact the author of the plugin.
