

Redmine - Feature #5849

How can I be notified on every new issue for a given project?

Description			
<p>Hi,</p> <p>I just wanted to know the best way to achieve this: I would like to be notified on every new issue for a given project.</p> <p>Is ATOM feed the best way? Is there another Rake task available for jobs to notify people?</p> <p>Thanks</p> <p>Leonardo</p>

I'll direct you to the forum for future support requests, the tracker is for bugs and feature requests only.

Regarding your request: you can either change your [mail notification preferences](#) to be notified about every change in a given project you are member of, or subscribe to the ATOM feed on the issue list (you can also refine the ATOM feed by creating a custom query and subscribing to the ATOM feed of said query).
