

Redmine - Feature #5849

How can I be notified on every new issue for a given project?

Description Hi, I just wanted to know the best way to achieve this: I would like to be notified on every new issue for a given project. Is ATOM feed the best way? Is there another Rake task available for jobs to notify people? Thanks Leonardo

I'll direct you to the forum for future support requests, the tracker is for bugs and feature requests only.

Regarding your request: you can either change your [mail notification preferences](#) to be notified about every change in a given project you are member of, or subscribe to the ATOM feed on the issue list (you can also refine the ATOM feed by creating a custom query and subscribing to the ATOM feed of said query).
