

Redmine - Defect #6007

Erro creating subProjects

2010-07-31 06:09 - Fernando ETCHEVARREN

Status:	Closed	Start date:	2010-07-31
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Projects	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description <p>First, let me say thanks for this marvelous application! I am running 1.0RC (upgrade from 0.9.6), the problem I have is that if I try to create a subProject with a non-administrator user (with all permissions for creating and modifyng projects) I get an error 403: the project is created, but the user cannot access it because its assigned an aleatory role (in my case, a supplier role I have created).</p> <p>If I log as an administrator, I can change the members of the project, and the project works, but I think this is a defect: non-administrator users, even with the right permission cant create subprojects correctly.</p> <p>Thanks.</p>			

History

#1 - 2010-07-31 11:41 - Felix Schäfer

- Status changed from New to Closed
- Assignee deleted (Jean-Philippe Lang)
- Resolution set to Invalid
