

Redmine - Feature #6118

Filter by parent task or subtasks

2010-08-12 07:42 - Xagyg Wulf

Status:	Closed	Start date:	2010-08-12
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	3.1.0		
Resolution:	Fixed		
Description			
There doesn't seem to be an option to use "parent task" as a filter. I want to be able to select parent task as a filter and say "Parent Task is null" - so that I get all top-level issues (as well as issues without any children).

Associated revisions

Revision 14304 - 2015-06-13 12:56 - Jean-Philippe Lang

Adds issue filters on parent/subtasks (#6118).

Revision 14305 - 2015-06-13 13:09 - Jean-Philippe Lang

Adds test for when filtering on invalid issue ids (#6118).

Revision 14310 - 2015-06-13 13:23 - Jean-Philippe Lang

Fixed test failure (#6118).

History

#1 - 2010-08-12 07:49 - Xagyg Wulf

Whoops - strike the bit in brackets "(as well as issues without any children)".

This is what I meant:

I want to be able to select parent task as a filter and say "Parent Task is null" - so that I get all top-level issues.

#2 - 2010-08-12 08:40 - Sepp _

+1

#3 - 2010-08-16 06:49 - Jeffrey Jones

+1 This would be a hugely useful feature for things like the Gantt chart where we want an overview.

#4 - 2010-08-30 17:06 - Anders Fältros

+1 Really would like to have this!

#5 - 2010-10-17 12:14 - Ewan Makepeace

+1

We have added a patch to sum all the estimated issues on the page, all the issues returned by the query and also those in each group when grouped. Parent tasks are causing us to double (or triple) count some hours as they report the sum of all their child tasks (which may also be in the same list). Even with a filter on Parent Task (which I support) I still have a problem - could there be a 'Has Child Tasks' filter as well perhaps?

#9 - 2011-04-07 11:09 - Martin Denizet (redmine.org team member)

My users don't like sub-tasking because they feel like it's making things more complicated and messy than before. I think a "Is Parent" filter would really help them!

+1

#10 - 2011-05-24 01:00 - David Andrews

+1 please.

#11 - 2011-08-16 14:50 - Ruedi Silvestri

+1 also a patch would be much appreciated.

#12 - 2011-08-16 23:41 - Terence Mill

+1

#13 - 2011-08-29 10:55 - Lucas CORBEAUX

+1, such a filter would be really useful.

#14 - 2011-08-30 00:44 - Terence Mill

+1

#15 - 2011-08-30 13:45 - Etienne Massip

- *Category set to Issues*

#16 - 2011-09-13 16:15 - Matthias Neubert

+1 seems that there will be some progress regarding this issue, can you determine for which version number this is planed?

regards

Matthias

#17 - 2011-10-03 22:42 - Mischa The Evil

This feature was first requested via issue #5728. It was created by the UX-Team after [[UXTeamMeeting1]] (see their meeting [[UXTeamMeeting1#Minutes|minutes]], under "Core Challenges Observed with Subtask Feature:", number 2).

I've just closed #5728 as a "duplicated by" of *this* issue since most of the (relevant) discussion has taken place here (as suggested by Colan Schwartz).

#18 - 2011-11-21 05:06 - Mischa The Evil

- *Target version set to Unplanned backlogs*

This, along with #6116 / #5325, seems important things to improve handling of subtasks.

same for us.

#32 - 2013-01-23 13:29 - Daniel Felix

Reference also #9992-8

#33 - 2013-01-25 10:48 - Alexey Efimov

+1 I'm interested in this feature also.

#34 - 2013-02-04 16:36 - Sylvain Just

+1 this feature will be very usefull for me too.

If anybody is interested, I also made a patch for display the parent subject and/or ID in email subject notification.
This information allow project manager to create template task with generic sub-tasks and copy it for recursives task.
Notifications by mail make more sense when subtask subject depends of parent subject.

Note : when task is just created, parent subject is unknown... so I display parent id instead of.

Any planned roadmap that could include this feature?

Would really improve my (and others) workflow.

Thanks.

#51 - 2015-02-12 13:56 - Daniel Felix

Our company uses many issues with many parent tasks. This feature would greatly improve our work with redmine, as we could filter all "master" issues. This would be really great to see this in the next release.

#52 - 2015-02-13 07:21 - Mischa The Evil

- File *rm6118-add_parent_issue_id_filter_to_issue_query-trunk_r13697.diff* added
- Assignee set to *Jean-Philippe Lang*
- Target version changed from *Unplanned backlogs* to *Candidate for next major release*

A while ago I started a test of the patch Felix posted in #6118#note-44, therefor I started writing a solid test to back up the rather small code change. I just finished extracting a patch (using git diff on a local dev branch, so don't mind the SHA's) from the older VM (source:/trunk@13697) I was working on, which includes the change proposed by Felix (although slightly adjusted to match current code [the filter key double quoted, while single quotes work just as fine here]) and an additional test (QueryTest#test_filter_on_parent_task_id) which covers the availability of the filter for issue queries and tests the functionality of each of the operators that are available for integer type filters. With this patch applied (as said on source:/trunk@13697) all existing tests pass (mysql-only, without ldap, scm and ui), as so does the newly added test for this feature.

@Jean-Philippe: can you assess/review this feature and patch to see if it can still be included in version#80? There is obviously a clear demand for this and the change seems rather small and oversee-able, especially now that it includes a test.

#53 - 2015-03-02 14:36 - Sebastian Paluch

This is great feature but should be done as more complete and include filter by parent task, root task and is leaf. Those are all parent-child relations.

#54 - 2015-03-17 16:23 - txemi M

+1

I am patching production with Felix's patch, I would love it included in next release.
Useful for views of root tasks or child tasks of given task.

#55 - 2015-04-30 13:50 - Jaromír Rys

+1

#58 - 2015-06-11 02:40 - Go MAEDA

- Target version changed from *Candidate for next major release* to *3.1.0*

I tested Mischa The Evil's patch on current trunk (r14300) and it works fine.

Could it be in Redmine 3.1.0?

#59 - 2015-06-13 13:00 - Jean-Philippe Lang

- Subject changed from *Filter by parent task* to *Filter by parent task or subtasks*
- Status changed from *New* to *Closed*
- Resolution set to *Fixed*

Mischa's patch is nice and simple but it does not address all the possibilities requested here.

I've added 2 filters in r14304 to filter on parent and subtasks (these 2 filters can be combined):

- parent
 - is XXX (=> lists child issues of XXX)
 - contains XXX (=> lists descendant issues of XXX)
 - none (=> lists root issues)
 - any (=> lists subtasks)
- subtasks
 - is XXX (=> lists the parent of XXX, maybe not so usefull)
 - contains XXX (=> lists ancestors of XXX)
 - none (=> lists leaf issues)
 - any (=> lists parent issues)

#60 - 2015-06-15 06:56 - Go MAEDA

Thank you very much for implementing this!

#61 - 2015-06-18 10:50 - Sebastian Paluch

That is great, no more plugins!

The only option that seems to be missing under "subtasks" is ability to show issue hierarchy deep to some level. This is useful to see overall list of job to do for a project to some level of details. (#20129)

#62 - 2015-06-18 16:21 - Colan Schwartz

Sebastian Paluch wrote:

The only option that seems to be missing under "subtasks" is ability to show issue hierarchy deep to some level. This is useful to see overall list of job to do for a project to some level of details.

Open another ticket for that (unless there is one already), and link to it from here. Let's not cloud this fixed issue.

#63 - 2015-06-30 20:09 - Alex Petty

Jean-Philippe Lang wrote:

| I've added 2 filters in r14304 to filter on parent and subtasks (these 2 filters can be combined):

Excellent!! Thanks Jean-Philippe!!

#64 - 2015-08-20 09:27 - Régis Leneveu

This seems to be the solution for some user-requests in our company.

Could you explain - for the rest of us - HOW I could create a filter which shows a specific tasks an all his related subtasks in a hierarchy?
I just can't figure it ou.

Thanks, Régis

#65 - 2016-04-04 07:23 - Toshi MARUYAMA

- Related to Feature #22147: Change "Related issues" label for generic grouped query filters added

#66 - 2017-05-01 14:20 - Go MAEDA

- Duplicated by Feature #10763: REST-API: Please add "parent_issue_id" as filter for requests to filter out subtickets added
