I see. what ever, thanks a lot.

#2 - 2007-05-28 03:39 - Jean-Philippe Lang

Sorry but it's not a bug. You can not upgrade your database and then use an older code.

So I see 2 solutions:

- restore your db backup and migrate with the 0.5.0 code (so you'll have a 0.5.0 database)
- use the latest source from trunk, and report the error you were getting.

#3 - 2007-05-28 03:24 - Andy Wu

I've checked the database. the database version is 47 and the name of 'comments' column has already been renamed 'comments'.

As you said, the code of the early version was from the trunk of the repository, and the version seems newer than 0.4.2, which has wiki already. After the new version (0.5.0) was published, I checked out the code from repository, and run the command: `rake db:migrate`
`RAILS_ENV="production"`. Because of some error of this new version (from trunk), I redownload the code of 0.5.0.

Now, I'm using 0.5.0 code. The database is from trunk, but I'm not sure which version of trunk it is.

#4 - 2007-05-27 07:53 - Jean-Philippe Lang

First, there was no wiki in 0.4.2. Wiki was added in 0.5.0.

It looks like your database schema is not in phase with your code. In `wiki_contents` table, 'comment' column was renamed 'comments' after 0.5.0.

Please, tell me what your database version is (select * from `schema_info`) and which code you're using (0.5.0 release or repository checkout).
