Description

First, when I was running 0.9.6 everything worked peachy. Then, a few days ago I ran 'sudo gem update', which broke redmine with the following error:

in /var//log/httpd/error_log:
[07/09/2010 04:35:37] Walter Heck: /opt/redmine-0.9.6/vendor/rails/railties/lib/rails/gem_dependency.rb:119:Warning: Gem::Dependency#version_requirements is deprecated and will be removed on or after August 2010. Use #requirement

The list of gems I have installed was then:
mon01 log]$ sudo gem list

I figured that since it was after Aug 2010, I needed to upgrade redmine, so I did an upgrade from 0.9.6 to 1.0.1 accoring to these instructions: http://www.redmine.org/wiki/1/RedmineUpgrade

After that, I did get to see the login screen, but after login I get another error 500, which displays in the logs like this:

Oh, I also had to run
