

Redmine - Feature #6326

Parse email with patches as generated by @git format-patch@

2010-09-08 07:54 - Olivier Mehani

Description			
<p>It would be nice if the Mail Handler could parse emails generated by git format-patch. It could thus generate an issue with the description, and attach the patch to it.</p> <p>I hacked the rdm-mailhandler.rb script to try to detect and preprocess such an email. When it detects a mail formatted by Git, it creates a multipart message with the patch as an attachment which it then submits to Redmine's MailHandler the normal way.</p> <p>This is highly experimental (as my first attempt at Ruby), and the use of TMail should be replaced by Mail. Also, I think this feature would better be implemented directly in Redmine's MailHandler rather than in rdm-mailhandler.rb.</p>
