Description

When writing a comment, I can insert a link to a file in the repository with e.g. source:trunk/app/controllers/issues_controller.rb; I can also insert a link to a specific revision's root, e.g. r4020.

However, if I would like to insert a link to a specific version of a file, I have to write the full URL, e.g. http://www.redmine.org/projects/redmine/repository/revisions/4020/entry/trunk/app/controllers/issues_controller.rb , or, at least a local one, like "Issues controller @ rev 4020" : /projects/redmine/repository/revisions/4020/entry/trunk/app/controllers/issues_controller.rb.

Instead, we could use e.g.

```
source:/trunk/app/controllers/issues_controller.rb@4020
```

History

#1 - 2010-09-12 16:01 - Barnabás Králik

... or, even better:

```
r4020:/trunk/app/controllers/issues_controller.rb
```
