

Redmine - Patch #6414

Added FLAG to Redmine.pm to AllowAlternateAuth methods on apache

2010-09-16 13:23 - Sergio Talens-Oliag

Status:	New	Start date:	2010-09-16
Priority:	Normal	Due date:

Target version:			
Description I want to use Redmine.pm to authenticate users when accessing subversion, but I also want to be able to authenticate non-Redmine users. To be able to do it I've added an additional flag to the Redmine.pm module to allow the use of multiple authentication methods. The name of the flag (RedmineAllowAlternateAuth) has been taken from the variable used on the Apache2::AuthNetLDAP and Apache2::AuthenNIS modules that is used for the same purpose. The attached patch is against an export of the redmine-1.0.1 tag.
