<b>Description</b>			
I can't use round brackets in links on wiki pages. "My page (Redmine)" :http://www.redmine.org/my/page link looks like "My page". All characters after left bracket is missing.

This is a feature of textile. The content inside the parentheses forms the title of the link. Unfortunately, there is no way around it without breaking textile compatibility (even more).

Thus, I vote for "Won't fix" for now.

- Status changed from New to Closed

- Resolution set to Wont fix

Indeed, that's how textile works.

If anybody needs this again (somebody asked on IRC this afternoon), you can do it in textile with html entities:

```
"this is a link with &#40;brackets) ":http://www.redmine.org
```
