Description			
<p>Redmine is really great software. However, it is sometimes tiring to click all the way through to some feature and then come back.</p> <p>Anyway, my suggestion is to integrate MochaUI into Redmine. All of the processes would be processed much quicker.</p> <p>Here is the demo of MochaUI: http://mochaui.org/demo/</p> <p>And here is the documentation: http://mochaui.org/doc/files/Core/Core-js.html</p> <p>And here is the GitHub project: http://github.com/mui/mochaui</p> <p>PS. Guys on MochaUI are developing the 1.0 stable version which should be out pretty soon.</p>

Looks less than usable on my iPad, so I'd be surprised if we were to go down that road. Anyway, feel free to Submit patches, mocks, or even to contact the [[UX_Team]]. You could also implement something using this atop the (coming) REST API I suppose.

Wow,, this is amazing!

+1 for that!

There are tons of JavaScript based UIs out there. And it sure would be nice if Redmine's UI would be improved a bit to take more advantage of recent web developments.

Yet I don't think MochaUI is the way to go for that. Indeed, it seems to be one of the smaller, less widely used JS GUI libraries, actually, and has not seen much development in the past year.
