Category:	Time tracking	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description			
On each issue page, provide a play/pause and stop button to automatically log time so you don't even have to think about it.			
Use case:			
<ol style="list-style-type: none">1. Dev is assigned an issue to work on2. Dev opens issue page3. Dev presses "play" button to signify start of timer4. Dev gets called away to a quick meeting, presses "pause" button5. Dev resumes work, presses play again6. Dev finishes on the ticket for the day and moves onto other work, presses stop button7. Popup dialogue appears for comment8. The time is automatically calculated from the duration the play button was active9. Time log is updated with above info			
Not 100% sure whether you need the "pause" button, it could just be logged as separate blocks of time.			
Maybe more suited to a plugin?

There is already the functionality via Redmine Messenger. You can type to bot *start ticket 12* (play) and *stop ticket* (stop).

The idea with buttons is good also!

See plugin http://github.com/GOYELLO/goyello_stuff_to_do. I guess this is what you need. I install it 2 days ago on redmine 1.0.stable.
