Description			
<p>If I want to enable or disable a specific (maybe new) module throughout a entire redmine installation, I have to walk thru the entire bazillion of projects on by one.</p> <p>It would be a nice (and possibly not very complicated) feature to</p> <ul style="list-style-type: none">- include a grid of modules (horizontal) vs. projects (vertical) like the "permissions report" or- a list of projects using a specific module (like in the tracks configuration) <p>that contains checkboxes to bulk enable/disable modules.</p>
