

Redmine - Feature #6548

Rake tasks to add/remove i18n strings

2010-09-30 22:18 - Eric Davis

Status:	Closed	Start date:	2010-09-30
Priority:	Normal	Due date:	
Assignee:	Eric Davis	% Done:	100%
Category:	Translations	Estimated time:	0.00 hour
Target version:	1.0.3		
Resolution:	Fixed		
Description			
It would help with i18n if there were two more rake tasks:			
<ul style="list-style-type: none">• one to add a new string rake locales:add key=text_a_new_string value="Default value"• one to remove a string rake locales:remove key=text_an_old_string			
It would be even better if it could be used to exclude specific locales like "exclude=en". This can be used to invalidate translated strings if the content is going to change.

remove_key isn't working. I'm editing a string and wanted to remove all translated strings so they can be retranslated.

```
$ r locales:remove_key key=field_member_of_group skip=en
(in /home/edavis/dev/redmine/redmine-core)
Deleting selected keys from ./config/locales/mk.yml

remove_key isn't working.

I'm so sure I tried it before committing it... Anyway, corrected version is up on the githubs, the diff is quite short though:

```
