

Redmine - Defect #6671

In version detail page of a project that has sub-projects when you click on a category of a sub-project it opens a wrong page

Category:		Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:			
Description			
<p>In the version detail page of project with sub-projects for example 'http://redmine.example.org/projects/parent-project/versions/1' in the 'Issues by category' section it shows all categories of sub projects. But they link to the parent project issue list instead of their own projects.</p> <p>For example if you have a category 'A' for version '1' of Project 'sp1' that is sub-project of 'parent-project' the links of 'A' hyperlink in 'Issues by category' is 'http://redmine.example.org/projects/parent-project/issues?category_id=1&fixed_version_id=1&set_filter=1' instead of 'http://redmine.example.org/projects/sp1/issues?category_id=1&fixed_version_id=1&set_filter=1' because the 'parent-project' does not have 'A' category with id '1' and so it shows all issues for that version instead of showing just issues of that category.</p>			

History

I've forgot to say that the version 1 must be shared with the sub-projects. At least I've seen this on this condition.
