

Redmine - Feature #6846

Add VIM-like keyboard shortcuts

2010-11-08 01:26 - David Petersen

Status:	New	Start date:	2010-11-08
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:	Unplanned backlogs		
Resolution:			
Description It would be very sweet to be able to navigation the issues list from the keyboard. examples: j: down k: up o: open/view issue x: select issue (allowing for multiple issue selection) ?: show keyboard shortcut help I am sure there are more that would be helpful			
Related issues: Related to Redmine - Feature #449: Keyboard shortcuts Has duplicate Redmine - Feature #27401: Switch from View ticket to Edit Ticke...

Kind of. But here we're speaking about javascript based shortcuts that do not require using Ctrl/Alt/Shift keys like regular html accesskeys.

#4 - 2011-03-15 18:31 - Steve Koppelman

Shortcuts assigned to unmodified keys would also have the advantage of being likely to work on OS X instead of being overridden by system keybindings. :)

#5 - 2011-11-11 16:11 - Austin Smith

I've implemented these shortcuts in a plugin: https://github.com/netaustin/redmine_keyboard_shortcuts

It still needs testing, but it supports these features and more in Chrome and FF.

#6 - 2011-12-09 22:39 - Brian Jacobi

Anyone test this yet? When we POC'ed Jira, users really liked having the shortcuts available

#7 - 2012-05-10 05:55 - Steven Wong

that's it .i used for firefox.

but it could not support the internet explorer.

+1 for adding this feature. Redmine is missing this key feature which is now becoming quite hot, and time is ticking.

#9 - 2014-02-09 22:46 - Anonymous

+1

#10 - 2014-05-08 02:02 - Szabolcs Szasz

Would be nice to rename this issue, and the related plugin, to "VIM-like" shortcuts. (Or, better yet (but harder): shift the focus explicitly toward *customizable* shortcuts.)

Most of those, who also desperately need keyboard shortcuts *in general* for Redmine, but come (e.g. here, via Google) from all the various other directions than vi, may feel a bit puzzled about why "the" keyboard shortcuts feature of Redmine should mean e.g. "k" for up and "j" for down. ;) Cheers!
