

Redmine - Defect #6857

git references leaking from subproject to project

2010-11-09 10:08 - Bernhard Furtmueller

Status:	New	Start date:	2010-11-09
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:	Candidate for next minor release	Affected version:	1.0.3
Resolution:			
Description			
<p>Since redmine can't share repositories to subprojects yet we added the repository twice (to project and subproject).</p> <p>Now trackers which are referenced in the repository get commit messages attached twice. One time from the project's repo and one time from the subproject's repo.</p> <p>I'd consider this leaking a bug (or a first step to shared repos ;))</p>

History

#1 - 2010-11-09 10:15 - Bernhard Furtmueller

I think there were already some attempts getting the root problem (sharing repos) fixed or asked.

Feature #1657 Subprojects can share their parent project's repository

Patch #2144 Patch for main-level repository

Patch #2256 Allow commit messages to refer to issues in project ancestor tree, not just project

#2 - 2011-08-24 09:17 - Etienne Massip

- Target version set to Candidate for next minor release

Yet to be confirmed.

#3 - 2011-12-21 17:40 - Mischa The Evil

I haven't looked into this issue deeply but considering r3357 for issue #4674, which was included first in Redmine version#16, it looks like it is logical behavior.

#4 - 2012-09-14 19:59 - Fernando Hartmann

+1

This happens to me too

#5 - 2013-03-02 08:24 - Ivan Cenov

This happens in 2.2.3.stable too with Subversion repositories.

#6 - 2013-04-19 07:04 - Jethro Yu

This happens in 2.2.3.stable too with git repositories.

#7 - 2013-11-27 14:56 - Ralph Twele

I have this happening with 2.3.0. It is not only related to parent-child Projects. I have one repository containing a document describing general development rules. This is included in many Redmine projects. If I commit a change to the document referencing a ticket the new revision will be listed in the ticket multiple times.

#8 - 2016-01-17 05:53 - Go MAEDA

- *Duplicated by Defect #5126: Associated revision shown multiple times added*

#9 - 2019-10-06 03:40 - Go MAEDA

- *Duplicated by Defect #32191: Duplicate associated revisions when using multiple repositories for a project added*
