

## Redmine - Feature #6920

### Allow subtasks to be affected to a different target version

2010-11-17 01:56 - Paul paul

<b>Status:</b> New	<b>Start date:</b> 2010-11-17
<b>Priority:</b> Normal	<b>Due date:</b>
<b>Assignee:</b>	<b>% Done:</b> 0%
<b>Category:</b> Issues	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b>	
We want to have subtasks assigned to be delivered in different Target Versions. This doesn't seem to be possible - Redmine ignores any change of the Target Version for a subtask and sets it to be equal to that of the parent task.

#### History

##### #1 - 2010-12-23 06:29 - Jean-Baptiste Barth

- Tracker changed from Defect to Feature
- Subject changed from Can't set a different Target Version for a subtask to Allow subtasks to be affected to a different target version

It will be even more difficult to calculate version progress, don't you think so ? Why don't you use issue relations instead of subtasks ?

##### #2 - 2011-05-16 17:44 - Etienne Massip

- Category set to Issues

##### #3 - 2013-07-05 13:04 - Mattias Amnefelt

The reason I would like this feature is that sometimes we have to pull a small part of a larger ticket out of a particular release, even if the main ticket remains in the release. Currently we have to remove the parent/child relation before we can move the subticket to another version.

##### #4 - 2013-08-07 18:29 - Roman Zimmermann

Calculating progress isn't as difficult as suggested: It's simply the average progress of all tasks assigned to a version that don't have a parent task assigned to the same version. The same holds for estimated times.

Having issues subtasks on different versions would help us a lot with the following use-case (for agile development):

- multiple product-projects (holding the backlogs)
- one sprint project - sprints are versions in the sprint project
- general user stories to track overall progress in the product-projects are assigned to product versions.
- more specific sub-user-stories that are assigned to sprints (target version)

It is not only affecting subtasks, also story and all the related tasks. How did you organize the tasks of a story if you can not set different target version - by time instead of context - is there a workaround for agile development?
