

Redmine - Defect #6941

Unable to export wiki page to text/html file

2010-11-19 08:18 - Illarion Kovalchuk

Status:	Closed	Start date:	2010-11-19
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
<b>Description</b> When I navigate to wiki page, and try to export it to html or text, I get the same result for both:  Original text of a wiki page  <code>h1. Test</code>  <code>Test</code>  I'm unable to get the version number of my redmine, because it is installed by admins on a separate server, and there is no place on the redmine page, with the version.  The result of export:  <code>\x68312e20546573740d0a0d0a54657374</code>

Merged r9374 from trunk.

History

#1 - 2011-01-10 12:44 - Daniel Hofer  
I also have the same problem with Redmine 1.0.5. But I had it since I installed Redmine 1.0.3.  
Also if I "view differences" in the Wiki i also get two lines in the same format. I am using Redmine with Postgresql.

#2 - 2011-04-27 21:13 - Anonymous  
I also have the same problem with Redmine 1.1.2.

#3 - 2011-04-27 23:31 - Etienne Massip  
- Status changed from New to Closed

It's a bug in the postgresql adapter with PG 9 which default bytea type format is now 'hex'.

See [HowTo\\_make\\_Wiki\\_history\\_working\\_with\\_Postgres\\_90](#), you can also consider switching to pg adapter, see [RedmineInstall](#) and [this postgres-pr adapter issue](#).
