Redmine - Feature #7319

Repetitive tasks ?

Description

The issue just came up to me, while I was doing some work that comes up every quarter.

I have some tasks coming up endless cycling, i.e. the preparation of mothly/quartery/yearly reports.

I would appreciate

- a type of tracker that goes back to some "open" state (preferably "assigned") on predefined intervals, or
- some kind of facility that spawns a new ticket at those predefined intervals

The definiton part could be an extension to the "new ticket" form, i.e.

```
[  ] Resurrect ticket every [<num>] [days/weeks/months/years], beginning on [date], to status [...
].
```

or

```
[  ] Repeat ticket creation every [<num>] [days/weeks/months/years], beginning on [date].
```

There should be a special permission to make tickets repetitive, and management could be done on the standard ticket edit form.

Same as #1176?

+1 by the way..

Not exactly, thanks for pointing out this relationship.

I've described a way to do both this and #1176 in issue #1176 ...

Please make clear how this issue differs from [#1176](). Thanks.

#9 - 2013-08-14 10:57 - Frank Helk

OK - I've read again over this ticket and [#1176]() along with the comments and contemplated over 'em.

The requested features look similar, and I admit that they basically propose the same thing. I presume that if the feature gets implemented in a way like I've outlined it detailed in [#1176#note-46](), it will probably fit both requests good enough to satisfy both.

Any news on that ?

I'm still in need for that ...
