Description

I love Redmine.

I think that it wants the following functions.

- Bulk copy & move selected issues
- The relationship between a child and his parents is kept with Ishuu after it copies it.
- It is possible to copy it onto different Toracker.
- The copy origin and the relation are set.
- There is an item named Build, and the value can be set.

Assumption of use

- Tracker: Requirement, Function, Test case, Test, Bug
- Copy form to: Requirement->Test case, Requirement->Function, Function->Test case, Test->Bug
    - Tracker is changed to to.
    - The copy origin and the relation are set.
    - Status is changed to New.
    - The relationship between a child and his parents is kept with Ishuu after it copies it.
- Copy form to: Test case->Test
    - Tracker is changed to to.
    - The copy origin and the relation are set.
    - Status is changed to New.
    - The relationship between a child and his parents is kept with Ishuu after it copies it.
    - Set value to Fixed version
    - Set value to Build.

Thank you for the presentation of the plugin.

I read document and WiKi, but was not able to understand the function of the plugin definitely.
Please teach to me the functions details.

requMNGT_plugin_redmine_v0.7.0_beta_doc.zip

http://forge.isotrol.org/wiki/org00006-requmngt

One good tool managing requirements and test cases is TestLink.
http://www.teamst.org/index.php

Is there the comparison list of the functions ?
The list will help me understand the functions.

Bulk copy & move selected issues

0.7 includes *Bulk edit/move/delete tickets.*

The relationship between a child and his parents is kept with Ishuu after it copies it.

That's there in 2.1.6 - not sure from which version though.

It is possible to copy it onto different Toracker.

#4117#note-2 has a screen shot indicating this funstionality existed at the time of 0.9.0

The copy origin and the relation are set.

Patch #7447 includes this for 1.0.4 and 1.1.0

There is an item named Build, and the value can be set.

0.9.0 - #461 provides bulk editing custom fields (for Build field.)

Overall, Feature #1125 implemented in 0.9.0, has a workable solution (except for the Copy relation).
