Redmine - Feature #7345

if a group is added, also the group should be announced on the project overview, instead the memebers

Description

currently groups are just a Admin Helper to bulkadd users to differnt roles, I would like to "hide" the real groupmembers with groups so the project overview shows the group instead the members, the group could still be clickable and show the members in group detail page.

This feature could also get interesting when a default groups "all from <role>" got added, related to issue #7342

What's the status on this issue?

Alternatively, we could only list the important roles on a project, not every role.
We want to use Redmine with our customers (every customer has his own project), so every project is private.
Everyone of us should have access to all projects, customers have only access to their own project, but we don't want all users listed in the project overview, only the important roles (like Account Managers, ...)
