Resolution:	Duplicate			

Description

I'm creating an interface that auto creates projects and tasks for specific orders. Essentially an order management system. A few things that would be nice to be able to set in the API:

Be able to create a sub project inside another project.
Be able to create milestones for a project.
Be able to edit and set custom fields
Be able to edit/create task relationships

Looking at the code examples I didn't see how to do those things, please correct me if I'm wrong.

History

#1 - 2011-01-30 00:45 - Andreas Saebjoernsen

I am also missing these features. I am working on a project that automatically updates part of the state of the issue tracker to keep it consistent with the state of the master branch of a repository, and these are the features that are holding us back the most. Is there any plans to implement this?

#2 - 2011-03-23 09:03 - Toshi MARUYAMA

- Category set to REST API

#3 - 2011-07-04 22:18 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Duplicate

> Be able to create a sub project inside another project.

Can be done using the parent_id attribute when creating the subproject.

> Be able to create milestones for a project.

See #7403

> Be able to edit and set custom fields

Can be done. See an example here: Rest_api_with_curl

> Be able to edit/create task relationships

See #7366
