<b>Description</b>			
Currently, the user can preview description/notes by clicking "Preview" at the bottom of the page. I think that there are two problems with this functionality.			
<ul style="list-style-type: none"><li>• The label "Preview" is too general... I expected to be previewing the whole ticket, not just the description.</li><li>• The preview is displayed at a relative distance to the actual content.</li></ul>			
How about trying one of these:			
<ul style="list-style-type: none"><li>• Display a full ticket preview.</li><li>• Place the Preview link directly under the description, and also have the preview display there too.</li><li>• Rename "Preview" to "Description Preview"</li></ul>

Associated revisions

Revision 3623 - 2010-03-28 17:17 - Jean-Philippe Lang

Preview description if it was edited while updating an issue (#741).

History

#1 - 2009-11-16 15:30 - Phil Hord

As mentioned in [#2094](#), the preview is also missing any updates to the original description field.

I think the preview is intended to be used for verifying the wiki-text formatting. I think that is why the notes are the only thing shown in the preview window. However, the Description text should have its own preview "button" if this is the case.

#2 - 2010-03-28 17:18 - Jean-Philippe Lang

- Subject changed from *issues: description/note previews* to *Description preview while editing an issue*
- Status changed from *New* to *Closed*
- Target version set to *1.0.0 (RC)*
- Resolution set to *Fixed*

As of [r3623](#), description will be previewed if it was edited.  
IMHO, previewing issue attributes doesn't make much sense so I close this ticket.
