#### Associated revisions

##### Revision 4903 - 2011-02-21 11:08 - Jean-Philippe Lang

Added Persian translation contributed by Behrang Noroozinia (#7418).

##### Revision 5595 - 2011-04-29 12:42 - Jean-Philippe Lang

Persian Translation update by Behrang Noroozinia (#7418).

##### Revision 13096 - 2014-04-17 02:21 - Toshi MARUYAMA

Persian Translation updated by shakib a (#16704, #7418)

##### Revision 13097 - 2014-04-17 02:34 - Toshi MARUYAMA

replace Atom by RSS (#16704, #7418)

##### Revision 13098 - 2014-04-17 02:43 - Toshi MARUYAMA

replace RSS by Atom (#16704, #7418)

##### Revision 13099 - 2014-04-17 02:53 - Toshi MARUYAMA

fix label\_module\_plural merge miss (#16704, #7418)

##### Revision 13100 - 2014-04-17 03:11 - Toshi MARUYAMA

remove permission\_manage\_documents (#16704, #7418)

#### History

#### #1 - 2011-01-23 11:02 - Behrang Noroozinia

Basecamp theme extension that supports RTL languages is also available at: <https://github.com/Behrang/redmine-themes>

#### #2 - 2011-02-21 11:12 - Jean-Philippe Lang

- Status changed from New to Closed
- Target version set to 1.2.0

Translation committed in r4903, thanks for your nice work.

A few strings were added since you submitted your translation, feel free to submit updates for this.

#### #3 - 2011-02-24 15:53 - Majid Tajamolian

- Status changed from Closed to Reopened
- % Done changed from 0 to 90

Strings of calendar legend are omitted.

#### #4 - 2011-03-18 18:16 - Ebrahim Mohammadi

- File *fa.yml* added
- File *fa.yml.diff* added

Thanks Behrang, you saved me a lot of translation work! :)

Just a few notes:

- Mainstream Persian name of "Persian" is "فارسی" (not "پارسی"),
- Mainstream name of Iranian weekend is "شنبه و یکشنبه",
- Provided short and long date formats are not popular ones,
- We've got two 3-letter complete words for AM and PM in Persian, in order "صبح" and "عصر", which are preferable to abbreviations IMO.

I've translated the missing words and fixed the mentioned issues. A patch against trunk as well as a complete *fa.yml* is attached.

A side note: first day of week (`general_first_day_of_week`) in *fa* locale is set to 6 which depends on #7097 to work correctly.

#### #5 - 2011-03-18 18:37 - Ebrahim Mohammadi

- File *fa.yml* added
- File *fa.yml.diff* added

Previous attachments were missing translation of new strings. Fixed files are attached.

#### #6 - 2011-03-26 20:35 - Behrang Noroozinia

Mohammad Ebrahim Mohammadi Panah wrote:

- Provided short and long date formats are not popular ones,
- We've got two 3-letter complete words for AM and PM in Persian, in order "صبح" and "عصر", which are preferable to abbreviations IMO.

Thanks for your contribution. I disagree with you on the first and second item and agree with the third and fourth item.

1. The reason I translated "Persian" to «پارسی» is that I tried very very hard to translate English words to real Persian words and avoided the use of Arabic words. So I translated "Persian" to «پارسی» for showing that spirit in the name of my translation.
2. According to the previous item, «عربی» is Arabic and «پارسی» is Persian. I think we can help people remember some Persian words that are used rarely.
3. Please provide some better formatting. I tried to change that and see the result on the Issues List page, but I couldn't find a good format which makes reading date and time in lists easy.
4. That's a good point, but again I don't like Arabic words. If I could find better Persian words, I would use them, but for now those are good translations. Maybe «پارسی» would be a good choice for AM. I don't know a Persian word for PM. But for now these are better translations than mine.

Again thanks. Together we can make a difference.

Behrang

#### #7 - 2011-04-11 10:35 - Behrang Noroozinia

- File fa.yml added
- File fa.yml.diff added

I have improved my last translation and missing translations are added. fa.yml and fa.yml.diff are attached. Please merge them in trunk.

Behrang

#### #8 - 2011-04-11 12:38 - Ebrahim Mohammadi

I've done a more thorough review of current fa.yml of Redmine. My conclusion is current Persian localization of Redmine has major flaws, mostly because of a flawed approach to localization. I'll present you with some notes in this regard, although I guess none of the core contributors know Persian language well enough to verify my statements.

However I encourage you to read a bit about Persian language and its relation to Arabic, maybe at [http://en.wikipedia.org/wiki/Persian\\_language](http://en.wikipedia.org/wiki/Persian_language). Long story short, script of Persian language is Perso-Arabic and there are a whole lot of Arabic words absorbed into Persian over centuries. People use many Arabic words in their daily life. (Wikipedia article says "40% of everyday literary activity".) Some of Arabic words are easily replaceable by their purely-Persian words, some are more difficult and the pure-Persian alternative will look alien to people, and some of them next to impossible. The Arabic words of Persian language are not considered a problem in general. They have enriched the language and people are happy with them.

However in some intellectual circles there is an extremist will for replacing all Arabic words of the Persian language with some pure-Persian word, which is propelled mostly by anti-Arab racism of some Persians.

(Well, sorry, my short story went too long!)

The issues with current Persian translation can be categorized under three types:

- Wrong translations: provided Persian translation is wrong.
  - Wrong translation of "issue" into "مسئله". Word مسئله is composed of مس + لیه and means consequence. There are better translations for "issue" such as "موضوع" or "موضوع". But I guess Behrang won't use them because he doesn't like Arabic words and these words have Arabic roots. (This is the reason Behrang has provided in his previous comments.)
  - Wrong translation of "page" into "صفحه". Persian word صفحه is equivalent of English word "sheet". The most straightforward Persian translation

of "page" is "صفحه". However I think Behrang avoided it again just because he doesn't like Arabic words.

- Wrong translation of "tracker" into "تتبع" which means "pursuit" or "prosecution". My suggested alternative is "ردیاب".
- Wrong translation of "change" into "تغییر" which means "to replace". Straightforward translation of "change" is "تغییر". This is Arabic again, which makes me think that's why Behrang has avoided it.
- Wrong translation of "news" into "اخبار" instead of the obvious equivalent "خبر" or "اخبار". Word "اخبار" means "event".
- Non-mainstream translations: provided Persian translation is not wrong, but there exist other more-used more-familiar mainstreams translations.
- Mainstream Persian name of Persian language is "فارسی". (As confirmed by the Wikipedia article.)
- Most popular Persian name of Friday is "پنجشنبه", not "پنجشنبه". (Check at [http://en.wikipedia.org/wiki/Iranian\\_calendars#Days\\_of\\_the\\_week](http://en.wikipedia.org/wiki/Iranian_calendars#Days_of_the_week))
- Inconsistent and ambiguous translation of "delete". Sometimes into "حذف", sometimes into "پاک کردن", ... The most straightforward translation of delete is "حذف" as a noun and "حذف کردن" as a verb. Again it seems it was avoided just because it has Arabic roots.
- Non-friendly and ambiguous translation of "priority" into "اولویت". Nearest meaning of "اولویت" is "advantage" and "prominence". Obvious translation is "اولویت". You guessed it, it is Arabic again.
- Ambiguous translation of "new" into "تازه". Nearest meaning of "تازه" is "fresh". Straightforward translation is "تازه". Yes, Arabic.
- Non-friendly and ambiguous translation of "manage" and "administration" both into "مدیریت". Maybe because the obvious translation of "manage" is "مدیریت", an Arabic word which Behrang doesn't like.
- Not translating some newly introduced foreign words
- "email" is not translated to its Persian alternative "پست الکترونیک", but transliterated into "ایمیل" or "ایمیل", which incidentally is already a word in Persian meaning "desire" or "will"!

If Behrang decides to change his approach, then the problem is solved. Anyway I'll be maintaining a Persian localization focused on correctness, usability, and consistency in my own branch of Redmine at <http://code.ebrahim.ir/redmine>. (I can provide patches against upstream trunk at any time.)

- "field" is not translated. My translation is "میدان".

It is not all of my notes, but I'm tired of writing, and probably you're tired of reading!

At the end it is a decision to be made by core contributors of Redmine which way they want to go in this regard:

1. providing a translation focused on correctness, usability, and consistency, (be it mine, or Behrang's after fixing his own.)
2. providing a translation driven by someone's personal feelings about words,
3. not delivering a Persian localization at all.

Sorry again for taking your time by my long comment.

#### #9 - 2011-04-11 12:42 - Ebrahim Mohammadi

I wish I could update my comments. Please someone with the permission take the paragraph starting with "If Behrang decides to change..." out of the bulleted list.

#### #10 - 2011-04-13 16:28 - Behrang Noroozinia

I think you hate my translation! I'm not an anti-Arab racist, or more generally any type of racist. Please don't insult people.

- About your wrong translations section:
  - You said "نتیجه" means consequence. If I try to translate your suggestions to English again, "نتیجه" would mean Problem and "مورد" would mean Item. So you see, trying to reversing the translation to show that my translation is wrong, is not a good approach. There is no pure translation. No translation would be 100% accurate. In my translations, I tried to understand the concept that the page wanted to tell, and then I created a translation. So there is no word to word mapping here.
  - Sheet means "مورد", not "نتیجه".
  - I agree with this one.
  - There are many "change" words in the source translation. Which one are you talking about? Some of them are verbs, some are nouns, and some other like change-set.

- Again, you shouldn't reverse translate ██████████ back to English.

- About non-mainstream translations:

- As I tried hard in choosing words, I chose ██████ to show this in the title of the translation.
- I think ██████ seems more natural to other week days in Persian than ██████ which means the day people gather to say their prayers.
- Again, depending to the context, same word may have a different translation.
- and again...
- and again...
- and again...

- About not translating some newly introduced foreign words:

- Are you checking the correct file?? No where in that file there is the word █████ which would mean desire! Check again. But I like ██████████ and I will use this suggestion in my next revision.
- I will check your suggestion for field in the context and see if it works.

I think instead of reverse translating my translation to see that it yields to the source, you'd better check RedMine with my Persian translation and see if it works for you! Does it tell you false information? Does this translation prevent you from doing your job? Does it block you from working with RedMine?

This is an open source project, and everyone can contribute what they want to the project. I spend some time in translating this project, because I liked it. You can too. You can provide your contributions (or even find and replace the words you don't like in my translation with some other words) and there is a process which will ultimately result in a translation for this project or they may be even two translations (or locales). But insulting people and destructing their work and their spent time is not appropriate and is not good for the community around it.

By the way, did you try to translate that big en.yml file or are you just changing my translation?

Behrang

#### #11 - 2011-04-13 16:55 - Ebrahim Mohammadi

I appreciate your effort as I have said before, and my fa.yml is totally based on yours, just reviewed and changed some parts. I meant no insult. Sorry if my wording was strong and has annoyed you.

I'm glad you're open to criticism and suggestions. I hope we can both focus on usability of Persian localization of Redmine, and share out efforts. We should be translating for *people*. It is Redmine users' right to face a familiar vocabulary with the least brain burden. (For example reading "██████" where user is used to "██████" challenges user's mind.) I suggest you take my fa.yml and take a look at our differences. Maybe you like some parts, specially differences I didn't mention in my previous comment. And please don't avoid using mainstream Arabic-rooted Persian words, for sake of users' ease.

As a final request: please, please, please at least change translation of "issue". "██████" doesn't make sense there, even remotely. "Issue" is a very important word in Redmine. Please fix it.

#### #12 - 2011-04-29 13:34 - Jean-Philippe Lang

- Status changed from Reopened to Closed
- Assignee deleted (Azamat Hackimov)

I've committed the latest changes from Behrang in trunk and I'm closing this ticket since 1.2.0 will be released in a few days.

That said, I'd like to get some feedback from other people to see if the current translation is OK or if it needs some heavy changes as suggested by Ebrahim.

**#13 - 2011-04-29 14:56 - Behrang Noroozinia**

I checked some dictionaries, and the word "پایگاه" is one of the translations which I still think is a good translation. I tried to change it with many other things like "مکان", "محل", "مکانچه", "مکانه" but I still think they are not good enough. On the other side, "مکانچه" which is one of the main translations in some dictionaries, is applicable. This is something that people, on the project development or clients or managers or ... want to be tracked and followed.

Currently we are two people and I think we should wait for more people to come to this page and provide their opinion. I don't think that this translation prevents people from using Redmine. When they started to use it, we can get more feedback and act appropriately. As currently this issue is closed, let's wait for 10 more people and then decide.

I also didn't have time to check your translation file, but I will check it soon.

**#14 - 2011-11-18 19:41 - Sayyid Amin Mirzaei**

I would like to appreciate the work done by both of you, Behrang and Ebrahim! Thanks!

I didn't update my redmine installation to 1.2 yet, so I haven't seen the translations. From the comments, I agree more with Ebrahim's suggestions.

Will be back when applied this patch!

**#15 - 2012-12-27 23:47 - s shekoofa**

Salam

I agree with "Sayyid Amin Mirzaei" and while i and my friend appreciate both Behrang and Ebrahim but really after some working with the persian Redmine with the Mr. Behrang's translation we decided to use the English translation! Because the persian translation seemed very odd to us. I must say that we are new to Redmine and the most important quest is the Iranian calander (Shamsi) for Redmine. Thanks to all developers of Redmine and you.

من بهرنگ نوروزینیا هستم و دوست دارم که شما را از این بابت آگاه کنم. من و دوستانم به کارهای شما بسیار متشکریم و امیدواریم که در آینده بتوانیم با شما همکاری کنیم.

**#16 - 2014-04-16 22:02 - shakib a**

- File fa.yml added

Hi

I have prepared a very smooth and fluent persian translation for Redmine.

I ask Mr. Jean-Philippe Lang to include this translation into the next versions of redmine.

I have used this translation for at least 1 year and Iranian users in my firm feel comfort with it.

Thank you very much in advance.

<http://www.redmine.org/attachments/download/11482/fa.yml>

**#17 - 2014-04-17 05:34 - Toshi MARUYAMA**

Committed in trunk r13096 to r13100, thanks.

**#18 - 2018-03-26 11:48 - Ashkan Valizadeh**

Hello

Thanks to every one who works on Persian/Farsi translation.

As somebody who lives in Iran and speaks Farsi, I have some objections to you, dear translators. I think the real effort must be take in a way to make the translation usable, In current Redmine translation there are words that we usually never use in day to day conversations, such as:

Day to day translation <= Current translation

۰۰۰۰ => ۰۰۰۰  
 ۰۰۰ => ۰۰۰  
 ۰۰۰۰ => ۰۰۰۰۰۰۰۰  
 ۰۰۰۰۰۰ => ۰۰۰۰۰  
 ۰۰۰۰۰۰ => ۰۰۰۰۰  
 ۰۰۰۰۰۰۰ => ۰۰۰۰  
 ۰۰۰۰۰۰۰۰ => ۰۰۰۰۰۰۰  
 ۰۰۰۰۰۰۰ => ۰۰۰۰۰  
 ۰۰۰۰۰۰۰۰ => ۰۰۰۰۰۰ ۰۰۰۰  
 ۰۰۰۰۰۰۰۰ => ۰۰۰۰۰۰  
 ۰۰۰۰۰ => ۰۰۰۰۰۰/۰۰۰۰۰۰۰/۰۰۰۰۰۰  
 ۰۰۰۰۰۰۰۰۰ => ۰۰۰۰۰۰۰  
 ۰۰۰۰۰۰۰۰۰۰۰ ۰۰۰۰۰ => ۰۰۰۰۰۰۰۰۰۰۰۰ ۰۰۰۰  
 ...  
 ...  
 ...

The preferred words/phrases are mostly Arabic, and some English.

I think every language (including Farsi) is what users/people of that language create to communicate with each other. It is not something that can be forced upon them.

Farsi people after hundreds/thousands of years preferred the current combination of words for themselves, which is a mixture of old Persian, a lot Arabic, some English, a few French and ... .

I think it is an evolution and progress for Farsi, and to try hard to only use the old Persian words is only closing of eyes to the new richness of language that is achieved by absorbing new words from foreign languages.

I request that dear translators, translate for users, and not forcing their visions, and point of view on them.

Thank you all.

**#19 - 2018-03-26 11:56 - Ashkan Valizadeh**

I must say that some example of above list is used in day to day conversations but not in the place or in the way that is currently used in translations, such as these ones:

□□□□□□ => □□□□□□  
□□□□□□□□ => □□□□□□  
□□□□□□□□□□ => □□□□□□□□□□

These words can not convey the real meaning in their currently used positions

**#20 - 2018-03-26 15:49 - Go MAEDA**

Ashkan Valizadeh, this issue is not a suitable place to discuss translation because it is already closed. Please create a new issue.

**#21 - 2018-03-26 22:00 - Behrang Noroozinia**

@Ashkan, please review the translations and change it with what you see fit, also update it for recent changes to Redmine and create a new issue and follow on. 7 years have passed, so my translations must be missing a lot.

**#22 - 2018-03-27 16:07 - shakib a**

Dear Ashkan, I agree with "Behrang Noroozinia" and "Go MAEDA". This issue is closed, and your better to open a new issue and link it to this one. If your new issue is verified as an bug or feature and could be resolved using your new translation, then it could be applied to the trunk. There you can discuss about it.

Thanks.

P.S. There are some local versions of Redmine, like <https://iransamin.ir>

**#23 - 2018-03-28 07:46 - Ashkan Valizadeh**

Thank you very much for your attentions and guidance.

I will update the translation as I use it at my work and after a few week of tuning it using my co-workers feed backs, I will create a new issue and upload it there and make a link to this issue.

Thank you all

**#24 - 2018-04-07 11:55 - Ebrahim Mohammadi**

See #28493.

**#25 - 2018-04-07 13:01 - Marius BALTEANU**

- Related to Patch #28493: Persian translation update and improvements added
