

Redmine - Defect #7615

CVS diffs do not handle new files properly

2011-02-12 20:39 - Jim Naslund

Status:	Closed	Start date:	2011-02-12
Priority:	Normal	Due date:	
Assignee:	Toshi MARUYAMA	% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:	1.2.0	Affected version:	
Resolution:	Fixed		
Description <p>The CVS adapter does not diff new files properly. I've attached a screenshot where the README file is new, but the diff is showing changes from a later revision.</p> <p>The source of the problem is the base revision used. For example "cvs -d '/cygdrive/c/workspace/redmine/trunk/tmp/test/cvs_repository' rdiff -u -r1 -r1.1 'test/README'" will produce the wrong diff because -r1 is interpreted as a tag. Using -r1.0 is one way to fix the problem.</p> <p>I've attached a patch that fixes the problem. There was also some code that preventing one line diffs from being shown ... I took it out because it works in this situation, but it may be there for good reason.</p> <p>By the way, my CVS version is 1.12.13.</p>
