

Redmine - Feature #7811

Add support for NTLM authentication mode for mail sending via Exchange Server

2011-03-08 17:06 - Eric Chaplet

Status: Closed	Start date: 2011-03-08
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Email notifications	Estimated time: 0.00 hour
Target version:	
Resolution: Wont fix	
Description The mail notification system doesn't work with Exchange Server 2007 in NTLM authentication mode The only authentication mode allowed by our exchange server is NTLM and redmine sends an error while connecting. See javamail 1.4.4 feature (ntlm support)for example : http://www.oracle.com/technetwork/java/javaee/index-138643.html "- NTLM authentication support is now integrated, no longer need jcifs.jar."

History

#1 - 2011-03-08 18:20 - Etienne Massip

- Tracker changed from Defect to Feature

AFAIK, NTLM authentication is not supported by redmine as of today, so this is a feature.

#2 - 2011-03-08 18:21 - Etienne Massip

- Subject changed from Mail notification doesn't work with Exchange Server in NTLM authentication mode to Add support for NTLM authentication mode for mail sending via Exchange Server

- Priority changed from High to Normal

Very Need this issue!!

#4 - 2012-04-12 14:36 - Gert van Dijk

A workaround for this could be to install a local MTA on the machine running Redmine and let it relay to the Exchange server. Here's a how to I found for Postfix as MTA and NTLM-authenticated client for relaying mail (not for Redmine, but for Trixbox): [Getting trixbox 2.6.2.2 Postfix to relay through Exchange Server 2007](#)

+1 !

I also would need this feature...

Sending mails via smtp using an exchange server (auth-method ntlm) is not possible at the moment. Many companies (as ours) use exchanges based email services and if redmine supported ntlm this would help us (and many others) very much. Maybe redmine will support ntlm auth method in one of the next releases?

#8 - 2012-12-13 16:17 - Florent Fievez

The solution that worked for me :

1. Create a Gemfile.local containing "ruby-ntlm" :

```
# echo 'gem "ruby-ntlm"' > /path/to/redmine/Gemfile.local
```

2. Install the Gem with :

```
# bundle install
```

3. Add the following line to /path/to/redmine/config/environment.rb

```
require 'ntlm/smtp'
```

4. Configure your smtp connection in /path/to/redmine/config/configuration.yml

```
# default configuration options for all environments
default:
  email_delivery:
    delivery_method: :smtp
    smtp_settings:
      address: exchange.domain.com
      port: 25
      domain: domain.com
      authentication: :ntlm
      user_name: 'user'
      password: 'pass'
```

#9 - 2015-02-09 13:00 - Toshi MARUYAMA

- Has duplicate Feature #18901: Redmine email smtp configuration still not support Microsoft Exchange Server NTLM and Kerberos added

#10 - 2024-01-29 01:41 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Wont fix

I am closing this issue because ActionMailer in Ruby on Rails does not natively support NTLM authentication for connecting to an SMTP server and there is nothing that can be done on the Redmine side.

The comment [#note-8](#) may be a solution.
