

Redmine - Defect #7917

Creating users via email fails if user real name contains special chars

2011-03-18 13:21 - Poul Thomsen

Status:	Closed	Start date:	2011-03-18
Priority:	Urgent	Due date:	
Assignee:		% Done:	50%
Category:	Email receiving	Estimated time:	0.00 hour
Target version:	1.3.0	Affected version:	1.1.2
Resolution:	Fixed		
Description			
If importing issues using the following command			
<pre>/usr/bin/rake -f /opt/redmine/Rakefile redmine:email:receive_pop3 RAILS_ENV="production" host=xxxx xx username=xxxxxx password=xxxxxx project=xxxxxx allow_override=project,tracker,category,priority unknown_user=create no_permission_check=1 tracker=support</pre>			
In some cases mails will be left on the server with the message:			
<pre>--> Message <xxxxxxxxxxxxx.xxxx.com> NOT processed and left on the server</pre>			
When sending a mail with a MailAuthName containing danish special chars "æøå" the mail will be ignored.			
It's not a problem creating the user in the system using æøå only the auto creation that fails.			
Ruby version: 1.8.7 (i486-linux) Rails version: 2.3.5 Redmine version: 1.1.2.stable.5164 (MySQL) Mysql version: 5.1.41-3ubuntu12.9

History

#1 - 2011-03-29 16:31 - Peter Brauner

This is an issue for me as well. Living Sweden we have the letters ÅÄÖ åäö in the alphabet. Now when using unknown_user=create the mails from the imap server is marked as read but is not delivered to Redmine. If I set the rake to use unknown_user=accept the mails will go through but then of course the user will be set to anonymous and won't get an account and therefor not any follow ups on the issues.

Cheers!

//Peter Brauner

#2 - 2011-03-30 09:22 - Etienne Massip

- Target version set to Candidate for next minor release

#3 - 2011-04-12 16:58 - Rogério Carrasqueira

Hi!,

I'm having the same problem with latin characters. I think that it can be treated as an important feature.

Anyone know of a workaround for this?, this is quite game breaking for us unfortunately.

I just made a Python class that connects to the IMAP server and then creates a user for each ignored email (those marked as "Seen"). I currently use it in my cron.

#10 - 2011-11-27 16:48 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version changed from Candidate for next minor release to 1.3.0

- Resolution set to Fixed

This should be fixed by [r7952](#). There are now defaults for login/firstname/lastname when those extracted from the email are not considered valid.

If you still have problem with user creation after [r7952](#), please attach a raw email so I can do some testing.
