Description

Hello,

I am having an issue with my Redmine installation where when I create a ticket for a given project, there is a specific user that I am unable to add as a watcher. The error I am getting is this:

```
translation missing: en, field_watcher_users is invalid
```

I've looked in the database at the user's record, but nothing stood out as different from anyone else. If I un-check the user and continue to create the ticket, it will create without issue. Once created, I am able to add the same user as a watcher to the ticket. The problem is only at the time of creation.

Anyone have ideas what the issue could be?

Thank you,

Zach

- Status changed from New to Closed

- Resolution set to Duplicate

Same as [#5373](#).

BTW, could you please do a dump of your users table <u>before</u> fixing your user as described in [#5373](#) and then compare the before and after contents of the table to help us solve this recurrent issue once for all ?

Thank you, The recommended fix is to change something in the user account and save? When I try to do this, I get a message:

```
Login has already been taken
```

Thoughts?

Strange issue. Not sure how a second user got created in the first place. In my case, the login seems to be case sensitive in one place but not in another. For example, the user with the log in Luke was able to get created somehow, while username 'luke' had already been there. The record with the username 'Luke' was bogus, so I just dropped it and its working again. Let me know if I can provide any more information.
