<b>Category:</b>	Custom fields	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected version:</b>	1.1.0
<b>Resolution:</b>			

#### Description

Trying to create a new custom field 'operating system' with some pre-defined values, we always received the message 'Invalid default value' during creation or 'invalid value' during bug submission.

After changing line 47 of app/models/custom\_field.rb to read

```
v = CustomValue.new(:custom_field => self.clone, :value => *self*.default_value, :customized => nil)
```

everything seems to work fine now.

#### History

##### #1 - 2011-04-20 18:06 - Etienne Massip

Do you have any plugins installed ?

##### #2 - 2011-04-30 13:10 - Marcus Ilgner

A few but none that should interfere with issue tracking and/or custom fields as far as I can see from their code.

##### #3 - 2012-02-03 13:07 - Samuel Triaud

I got the same issue.

Redmine 1.3, no plugins.

If I destroy this issues' custom filed and re-create it, I did not encounter anymore this issue.
