

Redmine - Feature #8364

Option to auto-create repositories

2011-05-13 04:00 - Be Fio

Target version:			
Resolution:	Duplicate		
Description Would be nice to have a redmine option to auto-create a repository after making a new project with the repository module enabled. Some additional features could be also to allow manual creation, e.g. in the repository area of the settings tab, when you enter the path to the new repo, have the system auto create a repository there. The path could also be autofilled in already, so all you'd have to do is click create. Would make everything a lot more useful, since reposman.rb on a cron wouldn't be needed to create new repositories.			
Related issues: Is duplicate of Redmine - Feature #6892: Automatic repository creation. <div>New2010-11-15</div>

I think i also saw another dupe issue (even feature of futire release), sadly can't remember the id

#3 - 2011-10-24 03:06 - Be Fio

This would go nicely with an option to delete the repository when deleting projects (disabled by default to prevent mistakes), or the option to delete the repository on a project per project basis (when deleting the project, the prompt can be displayed).

You're right Terence. Not only one dupe also. I'll close this one as a dup of [#6892](#) and will relate others to that issue too.
