Description

Some development methodologies suggest tracking time in points or even "tomatoes" (http://www.tecnicadelpomodoro.it). It would be nice if Redmine had the ability to support these forms of time tracking.

Can't you just do that yourself? Like, 1 hour 1 tomatoe, or 1 hour 1 point? Does it have to be reflected in the interface? Other then a simple text change, how would changing this effect how the time tracking currently works?

You might want to look at the templates, or the translations to see how you might customize your setup to change all "hours" to "units" or "tomatoes" or whatever turns your crank.
