Description Hi! Maybe someone else needs this. I currently need a way to auto map redmine users to git committers. It works if the git user and commiter have the same email address. But for some old repos I'm adding right now a few commits have been done from different workstations and different e-mail addresses are used. Would it be difficult to add multiple additional email fields for users so the mapping is done automatically when we add a new repo? I have never done any ruby dev in my life so I'm unable to add this functionality myself ATM. Cheers.

This issue is exacerbated by the Defect [#9897](#) which is due to the missing feature #1273. Each time there are dozens of emails we need to relink when a change requiring a resync of the repo is required.

This is done in [r13886](#), see [#4244](#).
